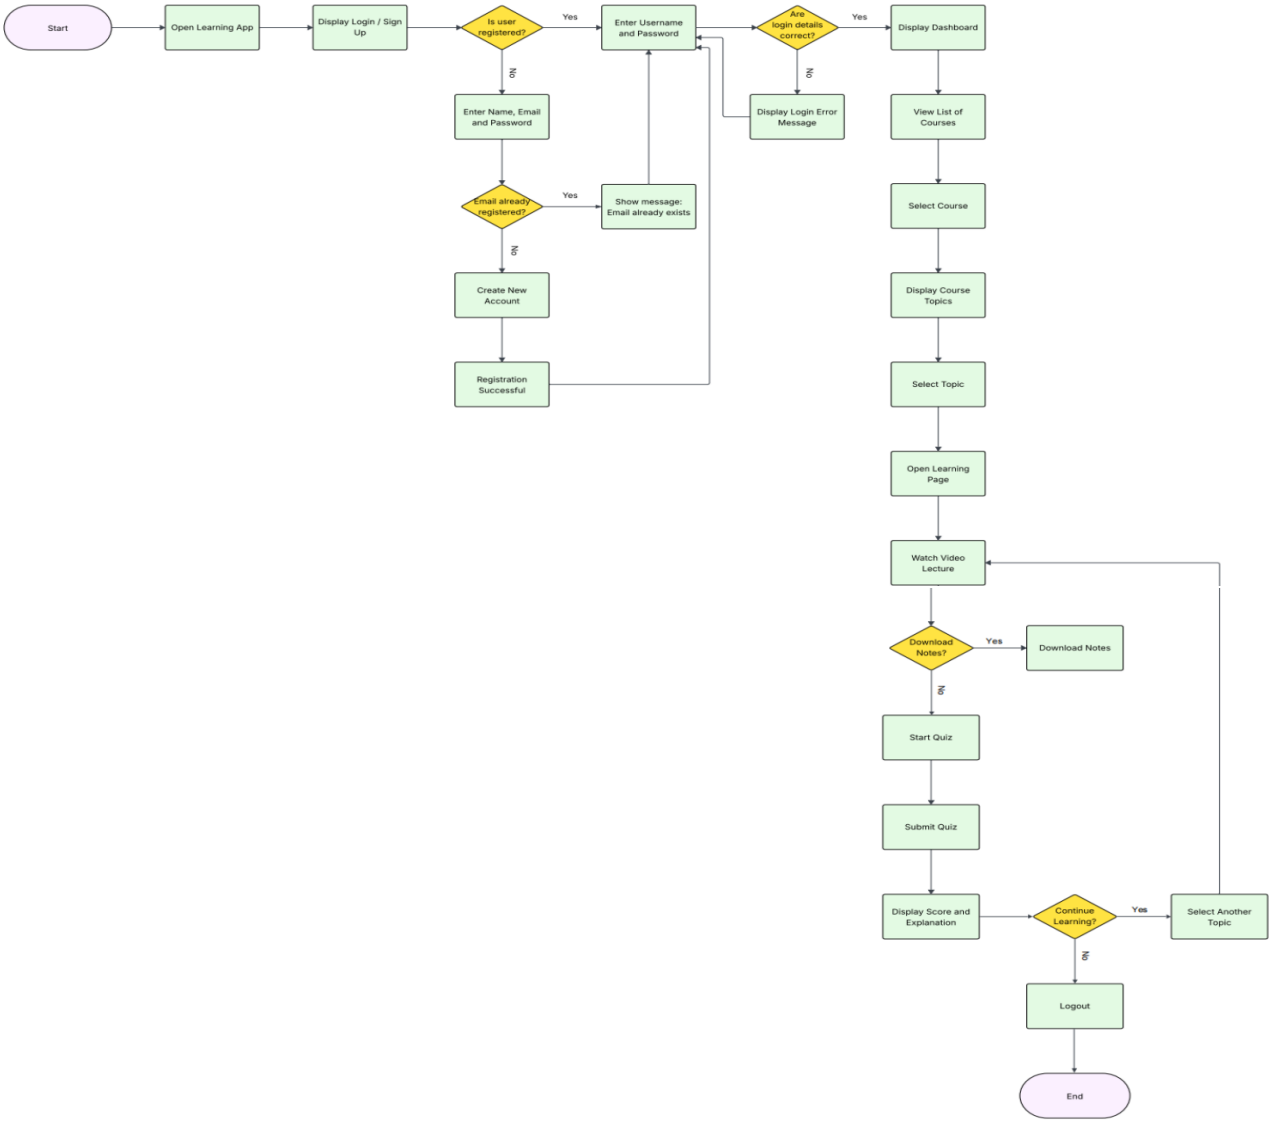
EXPERIMENT – 5

NAME: VEDHASREE S
REGISTER NUMBER: 240701580

Conduct task analysis for an app (e.g., online shopping) and document user flows. Create corresponding wireframes.

Task Analysis of Learning App (StudyHub)



Task Analysis (Explanation)

- The process starts when the user opens the learning application.
- The system displays the Login / Sign Up page.
- The system checks whether the user is already registered.

If the user is already registered

- The user enters their username and password.
- The system verifies the login details.
    - If the login details are incorrect
        - The system displays a login error message.
        - The user must enter the credentials again.
    - If the login details are correct
        - The system displays the user dashboard.

If the user is not registered

- The user must enter their Name, Email, and Password to register.
- The system checks whether the email is already registered.
    - If the email already exists
        - The system shows the message: "Email already exists".
        - The user must login with their name and password.
    - If the email is new
        - The system creates a new account.
        - The system confirms that the registration is successful.
        - The user can then log in using the new account.

After successful login

- The dashboard is displayed.
- The user can view the list of available courses.
- The user selects a course.

Learning process

- The system displays the topics under the selected course.
- The user selects a topic.
- The system opens the learning page.
- The user watches the video lecture.

Additional learning options

- The system asks whether the user wants to download notes.

    - If yes
        - The system downloads the notes.
    - If no
        - The user starts the quiz.

Quiz process

- The user starts the quiz.
- After answering the questions, the user submits the quiz.
- The system displays the score and explanation.

Continue learning decision

- The system asks the user whether they want to continue learning.
    - If yes
        - The user selects another topic and continues learning.
    - If no
        - The user logs out of the application.

End

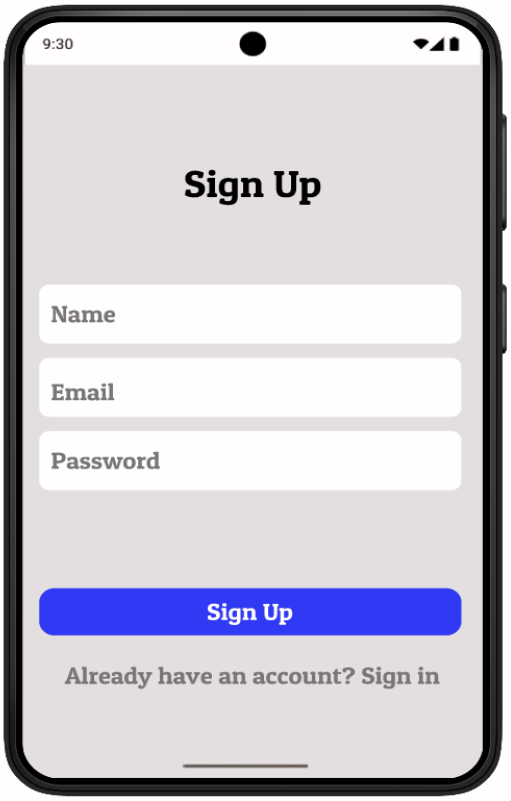
- After logout, the process ends.

Wireframes

Splash Screen

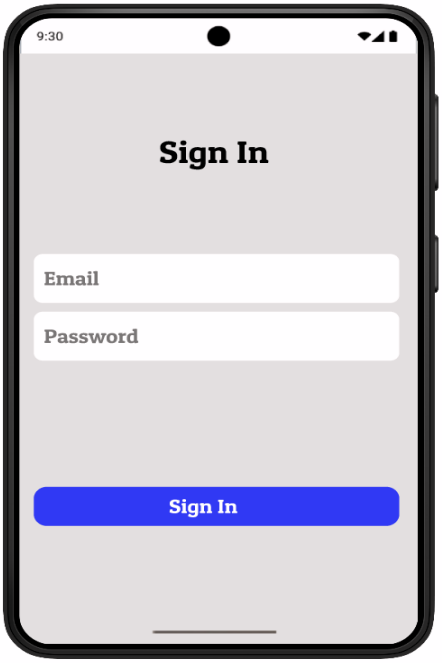
- User opens the StudyHub app.
- The splash screen is displayed.
- The app logo and name appear on the screen.
- A loading message is shown while the app starts.
- The app moves to the next screen automatically.

Sign Up Screen



- The Sign Up screen is displayed for new users.
- The user enters Name, Email, and Password.
- The user clicks the Sign Up button to create an account.
- If the user already has an account, they can select the Sign In option.

Sign In Screen

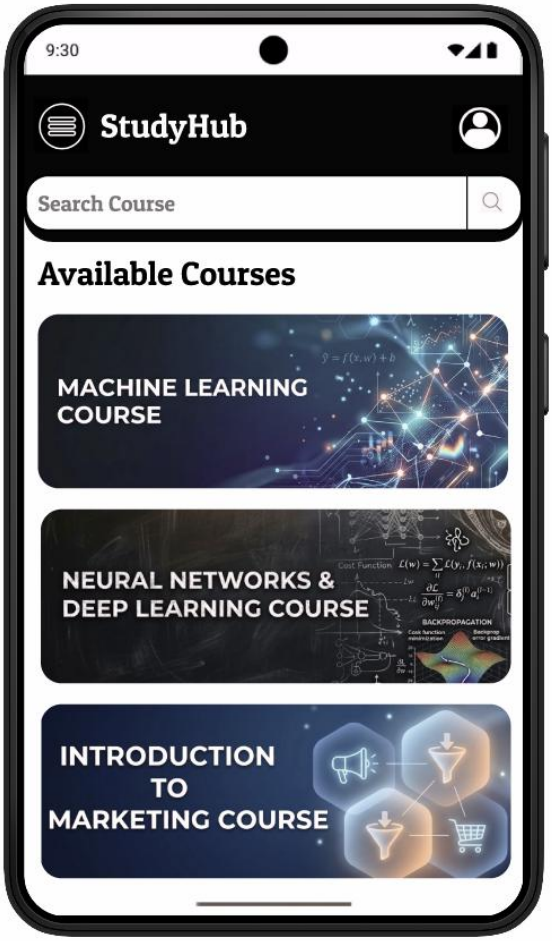


- The sign in screen is displayed for existing users.
- The user enters email and password.
- The user clicks the sign in button.
- The system verifies the login details and allows the user to access the app.

Dashboard Screen

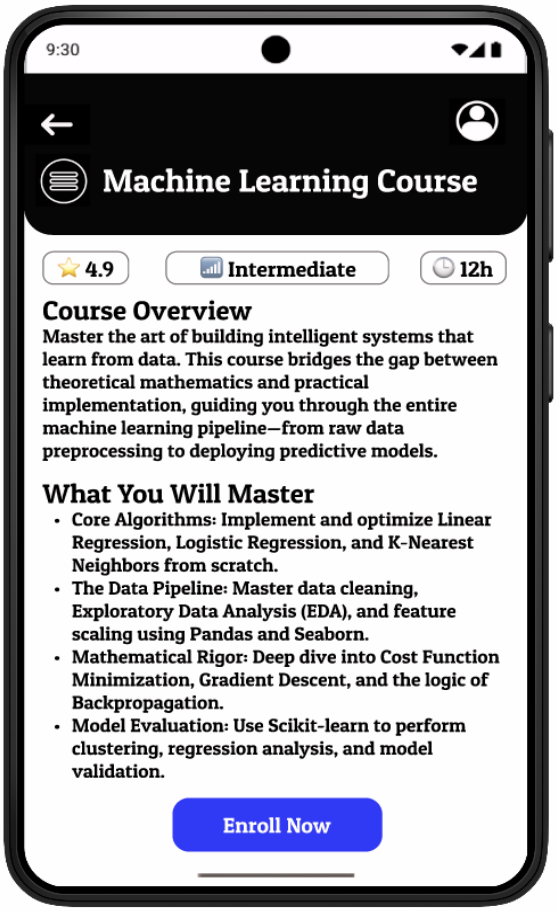
- The dashboard is displayed after the user logs in.
- The user can see the welcome message and search option.
- The screen shows course categories such as programming, design, and leadership.
- Featured courses are displayed for the user to explore.
- The user can select a course to start learning.

Available Courses Screen



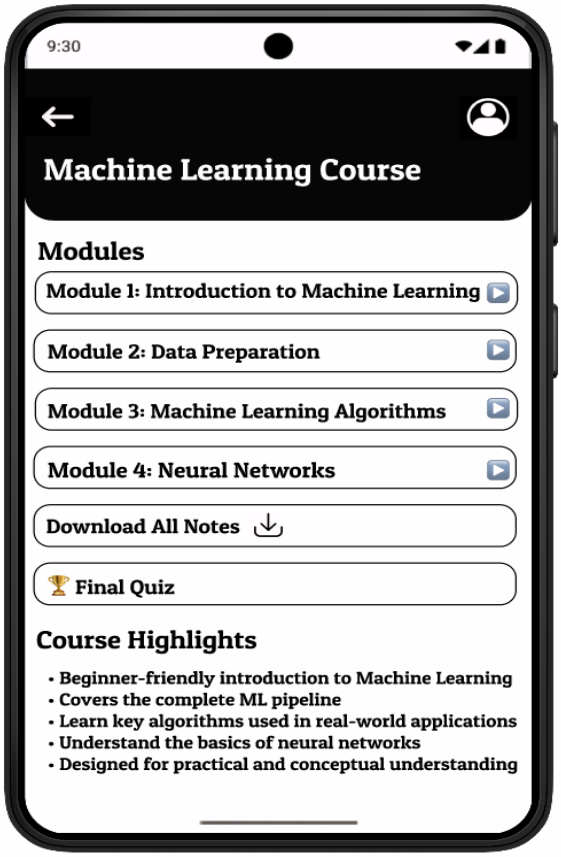
- The available courses screen displays the courses.
- The user can search for a course using the search bar.
- The system shows a list of available courses.
- The user can select a course to view its details and start learning.

Course Details Screen



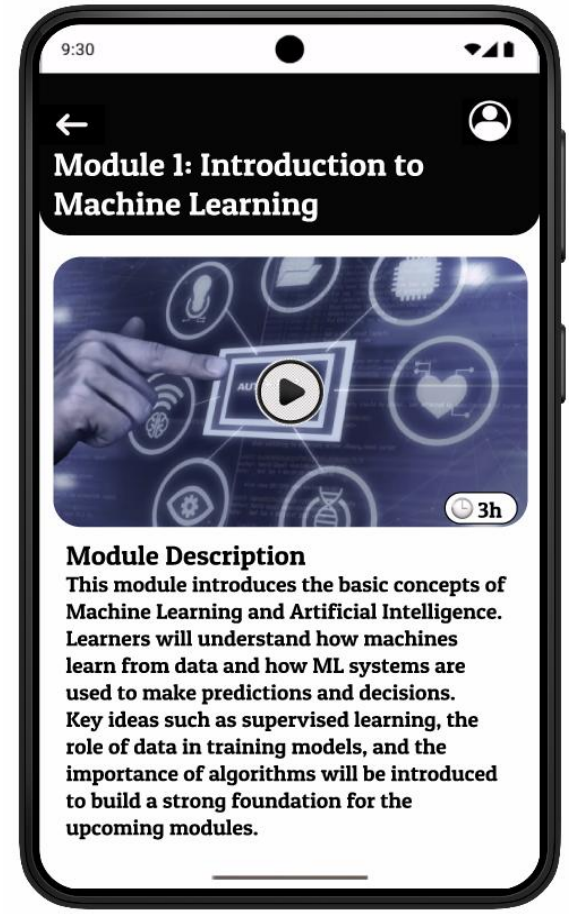
- The course details screen displays specific curriculum for Machine Learning Course.
- The user can see the 12-hour duration and the list of core modules.
- The system highlights key topics like Scikit-learn, Pandas, and Gradient Descent.
- The user can review the specific algorithms and tools covered in the course.

Course Modules Screen



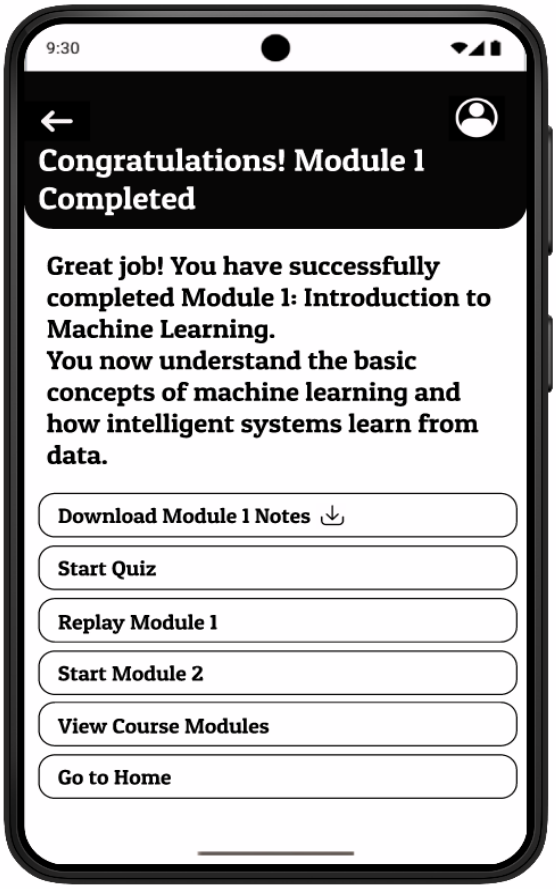
- The course modules screen displays the structured learning path.
- The system shows individual modules ranging from Introduction to Neural Networks.
- The user can download all course notes for offline study.
- The system provides a final quiz option to test the user's knowledge.
- The user can view a list of course highlights at the bottom of the screen.

Module Video Screen



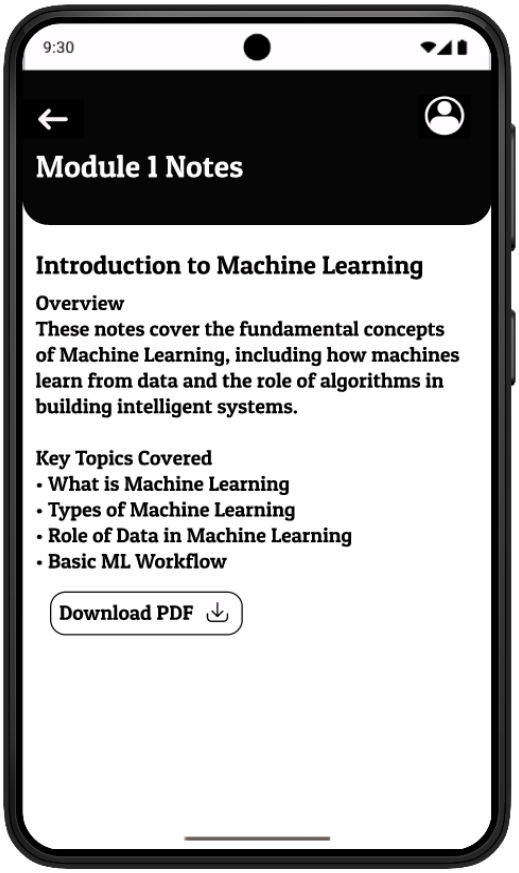
- The module video screen displays the specific title and duration of the lesson.
- The user can watch the instructional video by clicking the play button.
- The system provides a module description to explain the key concepts covered.
- The user can learn about foundational topics like supervised learning and training models.

Module Completion Screen



- The module completion screen displays a congratulatory message for finishing the lesson.
- The user can download specific module notes for future reference.
- The system provides options to start a quiz, replay the module, or move to the next lesson.
- The user can choose to return to the home screen or view the full list of course modules.

Module 1 Notes Download Screen

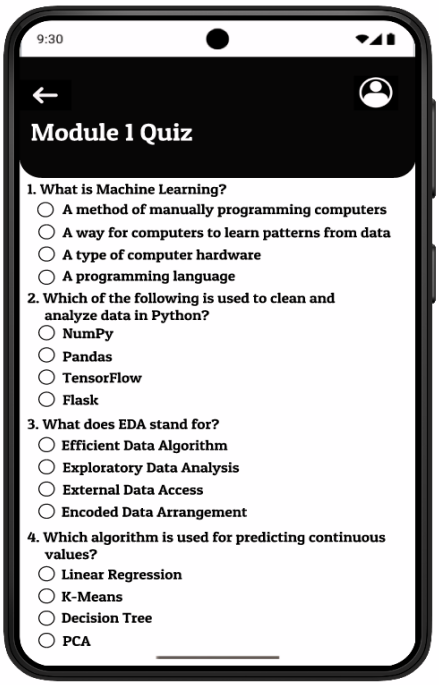


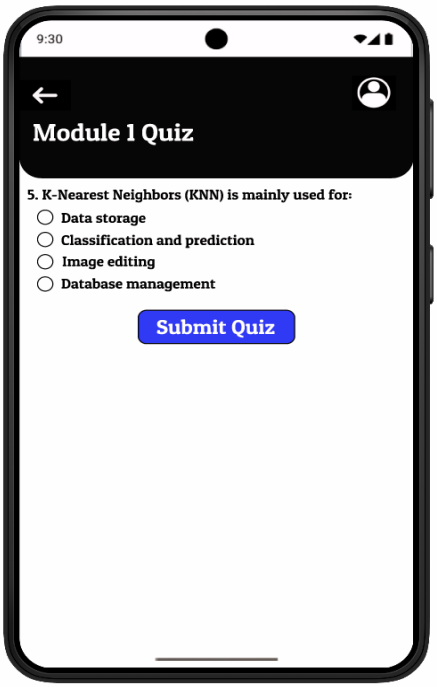
- This screen displays a summary of the fundamental concepts.
- The system lists key topics covered, such as types of ML and basic workflows.
- The user can review the overview to understand the role of data in building systems.
- The user can click the Download PDF button to save the notes for offline use.

Download Successful Screen

- The download successful screen confirms that the module notes are saved to the device.
- The system provides a clear message indicating a successful download.
- The user can click the Open Notes button to view the downloaded content immediately.
- The user can select the View Course Modules option to return to the curriculum list.

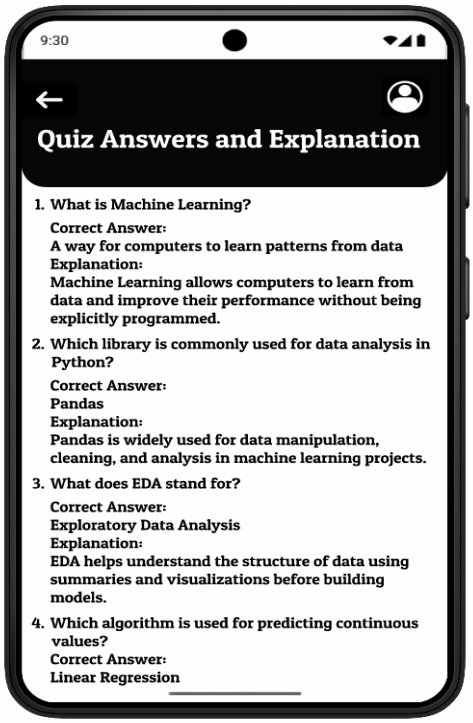
Module 1 Quiz Screen

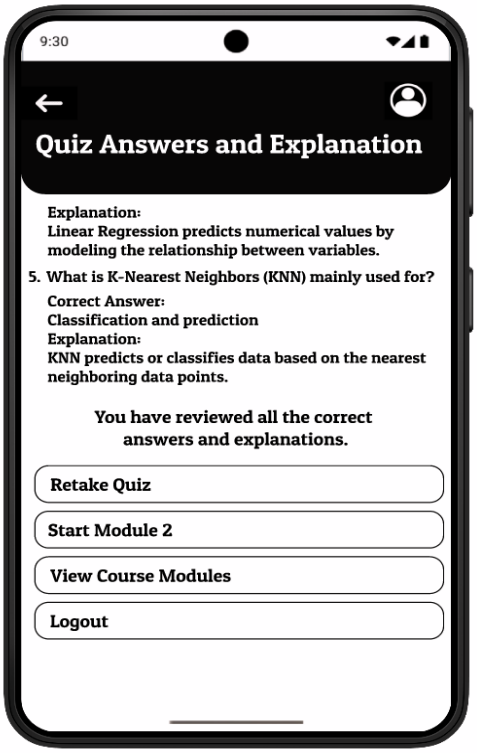




- The module 1 quiz screen displays a series of multiple-choice questions based on the lesson.
- The user can select the best answer for each question to test their understanding.
- The system covers key topics like Python libraries and Machine Learning definitions.
- The user clicks the Submit Quiz button at the end to finalize their assessment.

Quiz Answers and Explanation Screen





- The quiz answers screen displays the correct answers and detailed explanations for each question.
- The system helps the user understand key concepts like Machine Learning, EDA, and Linear Regression.

- The user can choose to retake the quiz, start the next module, or logout of the app.

Log Out Screen

- The log out screen confirms that the user has successfully exited the session.
- The system displays a clear notification message verifying the account is no longer active.
